HTML Basics

Date: 2025.9.4_____

The World Wide Web

The World Wide Web, also known as _____internet or the web_____, is a network of computers from all over the world connected through cables.

Server:Some of those computers

Client:others

The common language used by computers to communicate on the internet is __HTTP_____ which stands for _____Hyper Text Transfer Protocol_____.

How Does It Work?

Describe the process of making an HTTP request over the internet, and draw a diagram:

your web browser (Chrome, Edge, Internet Explorer, etc.) creates an HTTP request for the web page at the address you entered. The web server located at the address you entered, finds the web page document you requested and sends it back.

HTML

HTML is composed of groups of ____elements_____, which have 3 parts:

1. Opening Tag - Tells the web browser what needs to be done to the following content
2. Content - The pieces of data that should be displayed
3. Closing Tag - Tells the web browser when to stop processing content.

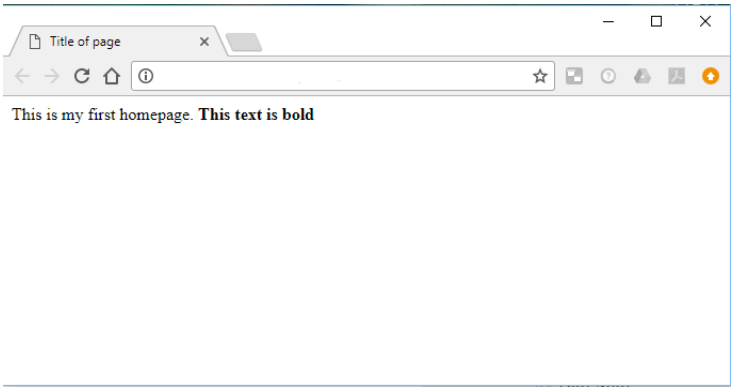

For example, to create a paragraph in HTML we write

In this element, the __ _____ is the _____opening tag_____, ___ _____ is the ___closing tag_____ and everything else ("This is a paragraph.") is the ____content_____. Only the sentence between the tags is treated as paragraph text. Note that we call and _____HTML Tags_____ and that both are required to create an HTML element. It is also important to know that these tags are not _____case sensitive_____.

The _____W3C_____ is responsible for creating and changing all web standards including:

1. HTML
2. CSS
3. XML

Write the HTML code for the basic page below and draw arrows to identify which elements control the visuals on the page.

The <html> and </html> tags are used for:

exist in EVERY HTML document as the first and last tags.

The <head> and </head> tags are used for:

the place where the look and feel is setup

The <body> and </body> tags are used for:

The body is where all visual elements, such as pictures, text, links, videos etc. should appear.

The one simple rule you should follow when creating HTML code is:

■ Whenever you open a tag, immediately create the closing tag before adding the content.

The and tags are used for:

■ Denotes normal sized text. ■ Creates a new line before and after the content on the screen.

The and tags are used for:

■ Emphasizes text by making it thicker than normal text.

The <h#> and </h#> tags are used for:

Emphasizes text by making it thicker than normal text

■ Modifies the size of text depending on the # used ■ Valid #'s are 1 (Largest) to 6 (Smallest) ■ Creates a new line before and after the content. ■ Creates extra spacing (called margins) before and after the content.

Review Work

Short Answer Questions

1. Explain the sequence of events that happen when you press enter after entering a web address into the address bar of your web browser.

your web browser (Chrome, Edge, Internet Explorer, etc.) creates an HTTP request for the web page at the address you entered. The web server located at the address you entered, finds the web page document you requested and sends it back

2. If an HTML file contains only the instructions for the layout of a webpage, what has to happen if the page being displayed contains a separate image file in order for that image to be displayed in a web page? Explain.

Only indicate a single image.

3. What are the 3 parts of an HTML element and why are they important?

1. Opening Tag - Tells the web browser what needs to be done to the following content
2. Content - The pieces of data that should be displayed
3. Closing Tag - Tells the web browser when to stop processing content.

4. What do you think would happen if…

a. the opening tag was missing in an HTML element?

Will not work

b. the content was missing in an HTML element?

No content indicated

c. the closing tag was missing in an HTML element?

Don't know when to stop
