Networking

Use the Ebook "Networking for Dummies - Chapter 1 " to answer the following questions:

1. What is Networking?
   Two or more devices that are connected to each other and are able to share information.

2. Define the following terms:

   LAN :
   Local Area Network small groups of computers connected to each other in a network in a small geographical area i.e. your home.

   On the Network :
   You are on a computer device that can share data with another computer.

   Online :
   You are connected to a network, more specifically the internet network.

3. What is the difference between a LAN (Local-Area network) and the Internet?
   The size is the main difference. The LAN is a network in a small area while the internet is the global network that spans the globe.

4. What are the different ways of **file sharing**?
   a.Email yourself or someone else attachment
   b.Save the file on the cloud i.e. google drive,one drive,dropbox
   c.Use the FTP protocol in a program(file sharing protocol)

5. Besides files, what else can be shared over a network?
   a.text
   b.chatting
   c.gamin d.email e.videos

6. What is a **server**? A **client**? What are some characteristics of servers and clients?

Server-a computer that stores and serves up data to other computers.For example, a game server will serve up the location and info on other players wanting to play a game with you.
Email server- a computer that stores all messages sent to your address.
Client-is a computer that is requesting the data from server, for example,you use hotmail as a client to retrieve your emails from the hotmail server.

7. What is a **dedicated** server?

These are computers whose sole purpose is to provide data to client computers.For example,many
Computers on the internet act as web servers and provide web pages to you when you are on a browser.

8. What is a **peer-to-peer** network?

In the network where every computer acts as both a server and a client. For example,torrent networks allowed you to both share videos,files,games,etc. While at the same time serving up these files,videos,and games to other computers

9. Outline some differences between dedicated servers and peer-to-peer networks.

10. List/describe the parts needed for networking.

11. Who is the network administrator and what are some of the duties of the network administrator?

Use the Ebook “Networking for Dummies - Chapter 5 “ to answer the following questions:

12. What is Ethernet?

13. Topology refers to the way a network is set up. Identify each type of Topology (refer to this video for additional info https://www.youtube.com/watch?v=zbqrNg4C98U) :
    a. What are the 2 main categories of topologies?
    b. What is the most commonly used wired topology?
    c. What is a major disadvantage of this topology?
    d. What is a major disadvantage of the ring topology?
    e. Describe a BUS topology? What is a backbone?
    f. What is the only advantage of using the BUS or RING topologies over the STAR topology?
    g. How is a MESH network good and how is it bad?
    h. Where is a MESH network used?
    i. What is a wireless access point(WAP)?

14. Older networks use coaxial cable which is similar to TV cable. What type of cable do most modern networks use?

15. Outline the differences between a **hub** and a **switch**.

Use the Ebook “Networking for Dummies - Chapter 9 “ to answer the following questions:

16. **Wireless** networking is also called WLAN or Wi-Fi, does not use cables. How does information get exchanged?

17. What is the range of a typical 802.11b wireless network?

18. Instead of hubs and switches, what do wireless networks use to connect?

Other questions to research :

19. What is an IP address?

20. What is a firewall?

21. What is Bluetooth technology?
