TEJ3M Basic Programming Project

Name(s):_____Shoaib Mahmood, Lucas Ha, Victor Wang_____

Project URL: _____CodeHS_____

Objective: To utilize the software development concepts learned in class to create a text based game.

Details:

1. Come up with an idea for your program. Your program must demonstrate all the things we've learned in class with regards to programming.
2. At the start of your game, make sure to clearly outline the main objectives of the game i.e. how it is to be played and how a player wins or loses.
3. Write the code.
4. Test and debug your program. Correct all syntax errors and more importantly fix all logic errors.
5. In your code highlight (use boxed asterisked comments) where you describe how you made use of the following programming concepts:
    a. if statements
    b. else if statements
    c. logical operators
    d. random numbers
    e. while loops
    f. for loops
    g. arrays/lists
    h. some new function that was not taught in class

6. Submit your source files each day at the end of class in the shared student repository.

Marking Scheme (ICS2O Basic Programming Project)

Name(s):[ ][ ]

Code -how was it organized and presented -spelling and grammar -code documentation -variables naming -did you highlight the key features?	25	C
Program -did you incorporate all the concepts -did you include all project requirements -how detailed were you in presenting the material	25	A
Complexity -how high level was the code -what new function/technique/concepts were you able to demonstrate -were you able to test and validate your program at a high level	25	TI
TOTAL (APPLICATION)	75
